Industry looks to AI, cost controls, supply chain re-engineering as tools to cope

ABU DHABI, UAE, Feb. 4, 2026 /PRNewswire/ ?? Logistics executives are bracing for a year of volatility in trade, geopolitics and the global economy, and managing uncertainty by turning to AI, scrutinizing costs, and reconfiguring their supply chains, according to the 2026 Agility Emerging Markets Index.

In a survey of 503 industry professionals, 86% say they expect increased volatility in 2026 or view trade, political and economic turbulence as the ??new normal.??

The Agility survey shows near-universal logistics industry adoption of AI. Ninety-eight percent of respondents say their companies are using artificial intelligence to manage a piece of their supply chain or operations. The survey also suggests that shifts in global production and sourcing ?? spurred first by COVID, then U.S.-China friction, and last year by a wave of tariff increases ?? are continuous today as companies restructure and fine tune their supply chains.

??Leaders in business and government realize there is no comfort zone, no time to rest. They??re searching for durable paths to growth at a time of extraordinary uncertainty,?? says Agility Chairman Tarek Sultan. ??They see AI as both a contributor to volatility and a tool to manage it. They??re facing new trade barriers in real time. They??re pushing the energy transition, and they??re navigating conflict between economic partners.??

The survey and Index are Agility??s 17th annual snapshot of industry sentiment and ranking the world??s 50 leading emerging markets. The Index ranks countries for overall competitiveness based on domestic and international logistics strengths, business climates and digital readiness ?? factors that make them attractive to logistics providers, freight forwarders, air and ocean carriers, distributors and investors.

The 2026 Index features in-depth analysis of the Arabian Gulf economies. Individually and as a group, the six Gulf countries are positioning themselves as global transit and logistics hubs, investing heavily in AI, energy transition, and talent development. The GCC area is â??thrivingâ?• as a trade crossroads, strengthened by rapid adoption and scaling of AI, and its ability to remain on good terms with both the U.S. and China. â??Volatility wonâ??t derail (Gulf) ambition,â?• the Index says.

Stability prevailed at the top of the 50-country Index rankings. China, India, UAE, Saudi Arabia, Malaysia, Indonesia, Qatar, Mexico, Thailand and Brazil rank in the top 10 in the 2026 Index.

The six Gulf countries all are among the top 12 for best business conditions, while the countries most digitally ready are China, Malaysia, India, UAE, and Saudi Arabia.

In international logistics opportunities, China, India, Mexico, UAE and Saudi Arabia rank highest. In domestic logistics, the leaders are China, India, Indonesia, Qatar and Saudi Arabia.

2026 Index Highlights

SURVEY

Transport Intelligence (Ti), a leading analysis and research firm for the logistics industry, has compiled the Index since it was launched in 2009.

John Manners-Bell, Chief Executive of Ti, said: â??One phrase which came up time and again throughout our research was â??structural uncertaintyâ??. â?? caused by geopolitical fragmentation, trade policy volatility and uneven economic momentum. The Index confirms that supply chain companies arenâ??t retreating from this uncertainty but instead are engineering around it. Looking at emerging markets, we see advanced digital tools being embedded in some while others are constrained by skill, infrastructure and access to capital. Since its inception, the Agility Emerging Market Index has enabled investors to differentiate between those countries which have fully embraced the opportunities and those which are lagging behind.â?• â?•
