COMUNICATO STAMPA - CONTENUTO PROMOZIONALE

The AI-native FP&A platform brings expert-grade modeling to every finance team. Describe the plan in natural language, and Modeler builds it on live company data in minutes, calculated by Abacum's Engine and approved by finance.

NEW YORK and BARCELONA, Spain, Oct. 13, 2026 /PRNewswire/ - Abacum, the AI-native FP&A platform, today launched Modeler, an AI agent that brings Agentic Modeling to finance teams. Starting from natural language prompts or existing spreadsheets, Modeler transforms initial inputs into live, fully functional business models instantly ready for execution.

Agentic Modeling is a new approach in which finance defines what a model needs to do, and an AI agent builds it. Instead of building a model line by line, teams set the requirements and the agent does the work. It selects the right structure from proven model blueprints, maps it to the company's connected data and lays out the full logic for review. Work that has traditionally taken days or weeks of manual build now takes minutes, and the time it gives back goes where finance teams want it: analysis, scenarios and strategic decisions.

That time matters. Building and maintaining models is one of the most time-intensive parts of the finance function, and in most companies the models that do exist live with one or two people. When those people are busy, the business waits. When they move on, every model they own is one resignation away from nobody understanding it. Modeler is built to change both.

How Agentic Modeling Works

Time back for the work that matters

With Modeler, the hours that used to go into building go into using the model. A headcount plan the VP of Finance needs by Friday is ready the same morning. A new revenue model for the board starts as a request, not a blank canvas. A question about how a forecast is calculated gets answered on the spot, without waiting for the one person who built it. Finance teams move faster, and the expertise stays with the team.

Commenting on the launch of Modeler, Julio Mart  nez, Co-Founder and CEO of Abacum, said: â  Finance has been told to do more with less for as long as anyone can remember. We think that promise has run its course. Modeler is about doing more with more: more models, built in minutes instead of weeks, by more of the team, with less lift than it has ever taken. The agent does the building, Abacum  s Engine still does the math, and finance still approves every model. What changes is how fast you get there, and who gets to build.  

Mart  nez continues: â  Every finance leader knows the model that lives in one person  s head. That isn  t a modeling problem, it  s a resilience problem. When more of the team can ask for a model, see exactly how it works, refine it with natural language, and ask it to explain itself, the model belongs to the business. That  s what AI-native should mean: not AI bolted onto the side of a platform, but a finance team that is AI-native itself.  

What  s next

Modeler is the first step in Abacum  s agentic modeling roadmap. Later this year, it will bring complete workbooks into Abacum, including formulas and multi-tab files, and will extend editing deeper into existing models, so teams can refine what they  ve built as easily as they create it.

Availability

Modeler is available today to all Abacum customers as standard functionality, included in the Abacum platform at no additional cost. To see Modeler in action, visit <https://www.abacum.ai/product/intelligence>.

About Abacum

Abacum is the AI-native business planning platform. Built first for finance and extended to every department, Abacum holds a company  s data, business logic and context in one governed layer, where AI agents and teams plan the business together. Agents own the recurring workflows; people own the judgment. More than 500 customers in over 40 countries run their planning on Abacum, including DISH, ThoughtSpot, Strava, Acorns and Replit. Founded in 2020 and headquartered in New York, with offices in Toronto, Barcelona, Buenos Aires and the UK, Abacum is backed by more than \$100 million from investors including Scale Venture Partners, Atomico and Y Combinator. Abacum is ISO/IEC 27001 certified, SOC 2 Type II and GDPR compliant, and is the first new FP&A platform NetSuite has accepted into its Built for NetSuite program in over a decade.
