COMUNICATO STAMPA â?? CONTENUTO PROMOZIONALE

SHENZHEN, China, Nov. 17, 2026 /PRNewswire/ â?? KanDao Technology, a global pioneer in the video camera and imaging industry, has launched Kandao Focus & Focus SE, the 4K AI webcam. This series of webcams is designed to provide a professional image experience at an affordable price for everyday work, study, and content creation.

Although itâ??s Kandaoâ??s first exploration in the webcam field, the Focus has already won the 2026 Red Dot Design Award.

The 4K AI webcams are designed for video conferencing, live streaming, online teaching, and content creation. AI tracking and built-in 2-axis gimbal detect presenterâ??s movement and keep it always in frame. With gesture control, fast autofocus, landscape and portrait shooting, and multiple modes for different scenarios, the Kandao Focus makes presentations clearer and everyday workflows easier.

â??Our experience in imaging, AI, and video conferencing has helped us to rethink what a webcam can offer. We aim to bring versatile features together in one camera to support different uses and make everyday workflows easier,â?• said Dan Chen, CEO of Kandao Technology.

Professional Imaging in Any Light

Kandao Focus series uses a 1/1.5-inch CMOS sensor, larger than those found in many webcams in the same price range. Combined with an f/1.6 aperture, it captures more light for brighter, cleaner, and more detailed images in low-light conditions.

4K@30fps captures fine textures and important details with clarity. PDAF autofocus locks onto subjects quickly and keeps them sharp during live commerce.

HDR mode balances highlights and shadows for more true-to-life images in challenging lighting, including overexposed, backlit, and low-light environments.

AI Tracking and Gesture Control for Presentations

The Focus features a motorized 2-axis gimbal that tracks the presenterâ??s movements in real time. Whether teachers move around the room while teaching online or instructors demonstrate yoga poses during a live stream, Focus keeps them in frame and centered.

The Focus SE features a manually adjustable 2-axis gimbal with up to 270 degrees of tilt and 180 degrees of pan. Users can effortlessly adjust the camera angle to suit their needs.

Users can control the camera with three hand gestures:

Multiple Modes for Different Scenarios

The Kandao Focus series offers multiple modes for different uses.
