

Bitrise Bridges GitHub's Mobile Performance Gap with New Purpose-Built Infrastructure: Bitrise Build Hub

Descrizione

COMUNICATO STAMPA - CONTENUTO PROMOZIONALE

The mobile CI/CD leader launches fully-managed Apple silicon and Linux infrastructure with a powerful execution layer for GitHub Actions.

SAN FRANCISCO and LONDON, Feb. 4, 2026 /PRNewswire/ - Bitrise, the leading DevOps platform for mobile, announces the launch of its new product, Bitrise Build Hub for GitHub. Build Hub is fully managed, mobile CI infrastructure for GitHub Actions that gives developers access to the fastest MacOS machines (M4 Pro), preconfigured build environments, and automatic Xcode stack updates: all without a complex migration or workflow rewrites.

"Bitrise has spent a decade solving mobile development and release pain points for developers," said Barnabas Birmacher, co-founder and CEO of Bitrise, "And now we're bringing our fast, reliable and secure infra capabilities to the wider GitHub community."

Freeing developers from mobile development infra headaches

GitHub Hosted Runners lack basic mobile toolchains and the processing power to handle complex builds. Costly self-hosted Mac fleets that sap developer time with sysadmin work and slow iteration have been the only alternative.

With Bitrise Build Hub, DevOps teams can now keep GitHub Actions as their CI orchestrator but point jobs to Bitrise's mobile app development infrastructure.

Early adopters are seeing significant speed gains. "Even the smaller-sized VMs exhibit a performance improvement, nearly 30% faster, when compared to macOS XL GitHub Hosted Runners," said Daniel Gilbert, Mobile DevOps Developer at ForeFlight.

Superior developer experience for the GitHub community

A recent analysis of tens of millions of anonymized Bitrise builds showed teams reduced build times by 28% on average when running on managed infrastructure tailored for mobile app development at scale.

Key benefits of Bitrise Build Hub include:
