COMUNICATO STAMPA - CONTENUTO PROMOZIONALE

Global leader recognized among 11 vendors in the 2026 report

COPENHAGEN, Denmark, June 23, 2026 /PRNewswire/ - Configit, the global leader in Configuration Lifecycle Management (CLM), today announced it has been named as a Sample Vendor in the Gartner Hype Cycle for Digital Commerce, 2026 in the Composable Product Configurators category.

AI and AI agents are transforming digital commerce as customer buying behavior evolves. As Gartner noted in the report, a key driver of configurator adoption is that B2B buyers and sellers want to conduct more business through the self-service digital commerce channel because it is more convenient for buyers and less expensive for sellers. To increase the volume and value of online business, it is necessary to support the selling of more complex goods and services.

Configit Ace® is a composable SaaS product configuration and variant management solution designed to solve the most complex configuration challenges. Configit delivers a fully integrated, product configuration platform built on its Virtual Tabulation® (VT) technology. It remains uniquely capable of solving the world's most complex configuration problems deterministically and with mathematical certainty.

Gartner also noted that "Deploying a composable product configurator improves win rates and average order values, reduces the cost of samples and order rework, and enables selling through all channels."

Johan Salenstedt, CEO, Configit, said: "We believe, this Hype Cycle underscores the need to support the configuration of customizable products that work for both buyers and sellers in the AI era. With Configit's composable product configurator Ace, manufacturers can enhance their current configurators with an enterprise-wide deterministic AI solution, eliminating configuration errors, reducing

time to quote, and accelerating time to market while enabling cross-functional collaboration. We truly feel that being named a Sample Vendor highlights our ongoing mission to reimagine the customization and manufacture of complex products as organizations navigate AI adoption.â•
