VILLEPINTE, France, April 24, 2026 /PRNewswire/ â?? GUERBET (FR0000032526 GBT): Guerbet, a global leader in medical imaging, announces a positive outcome from a worksharing procedure, involving several EU member states, for a new LipiodolÂ® indication in interventional radiology procedures for peripheral and central vascular embolization with cyanoacrylate-based surgical glues compatible with Lipiodol Ultra Fluid and approved for endovascular use, to allow visualization of the procedure and adjustment of polymerization time. This represents an important regulatory milestone that will be followed by subsequent national approvals amending the existing marketing authorizations. This step is significant for LipiodolÂ® within interventional radiology protocols and confirms its clinical relevance in minimally invasive procedures.

Francois Convenant SVP Interventional Radiology comments: â??This regulatory achievement for LipiodolÂ® indication in vascular embolization marks a significant milestone for our field. Its radiopacity and physicochemical properties enable more controlled, predictable, and safe embolization procedures. This indication formalizes years of clinical practice and paves the way for harmonizing glue embolization techniques across Europe.â?•

Scientific Rationale and Clinical Impact

Interventional radiology relies increasingly on embolic agents that offer precision, speed, and durability. In this context, LipiodolÂ® combined with cyanoacrylateâ??based glues provides a controllable, radiopaque liquid embolic agent that enables:

A Stronger Commitment to Healthcare Professionals Across European Community.

Guerbet reinforces its commitment to support interventional radiology teams throughout the region by offering:
