COMUNICATO STAMPA â?? CONTENUTO PROMOZIONALE

HANGZHOU, China, July 3, 2026 /PRNewswire/ â?? Hikvision announced that its DeepinView network camera series (iDS-2CD7x) has successfully obtained the EUCC (The European Cybersecurity Scheme on Common Criteria) certification. This milestone marks the worldâ??s first product in the CCTV camera category to achieve this prestigious certification, highlighting Hikvisionâ??s commitment to robust product security and compliant digital governance.

The certification was issued by TrustCB B.V., an independent certification body authorized by the Dutch Authority for Digital Infrastructure (RDI). The comprehensive security evaluation was performed by Bureau Veritas Cybersecurity Europe, a globally recognized third-party testing laboratory. Conducted in compliance with ISO/IEC 15408 (Common Criteria) and CEM:2022 R1 standards, the certified iDS-2CD7x series meets the EUCC â??Substantialâ?• assurance level, aligned with Evaluation Assurance Level 3 (EAL3) augmented with ALC_FLR.2 (Flaw Remediation) requirements.

Navigating a Harmonized European Cybersecurity Landscape

As a newly adopted, highly authoritative product cybersecurity framework in Europe, the EUCC is built on internationally recognized Common Criteria (CC) standards. It utilizes rigorous, independent testing and auditing to systematically verify a productâ??s security capabilities, development processes, and vulnerability management.

With the European Union actively strengthening digital product safety requirementsâ??such as the Cyber Resilience Act (CRA) introducing lifetime security demands for â??products with digital elementsâ?•, and the NIS2 Directive imposing stricter cyber duties on critical sectorsâ??the EUCC serves as a trusted benchmark. It provides manufacturers and end-users with unified, reliable proof of compliance, offering an essential reference for sectors with high security requirements like government, critical infrastructure, energy, and transportation.

A Structured Approach to â??Security-by-Designâ?•

In todayâ??s interconnected digital landscape, cybersecurity has transitioned from a supporting feature to a fundamental pillar of trust. Achieving the worldâ??s first EUCC certification in the camera category reflects Hikvisionâ??s structured â??Security-by-Designâ?• approach. By integrating rigorous security principles into every phase of the product lifecycleâ??from conceptualization and R&D to testing, delivery, and ongoing maintenanceâ??the company ensures that device security is proactively managed from the ground up.

This certification specifically validates the iDS-2CD7x seriesâ?? robust security controls in key areas, including identity authentication, access control, secure communications, security auditing, and vulnerability management. By establishing this new benchmark, the company provides a new reference for cybersecurity compliance across the industry, while further bolstering global customer confidence in Hikvisionâ??s products and solutions.
