Angelalign Has Already Replaced Torque Ridges with Upgraded Pressure Points in Europe

SAN CLEMENTE, Calif., Oct. 16, 2026 /PRNewswire/ • Angelalign Technology Inc. (6699.HK) (Angelalign) <http://www.angelaligner.com>, a company driven by innovation in orthodontic clear aligner technology, said today that a ruling by the Paris Local Division of the Unified Patent Court concerning its Torque Ridges feature does not affect the availability of its offering in Europe, which already incorporates the next generation of torque-control technology.

Angel already has discontinued Torque Ridges in Europe and has replaced it with an upgraded feature called Pressure Points. Pressure Points, which launched in the European market in September, was designed to improve torque control and reflects Angelalign's continued commitment to innovation focused on solving orthodontists' clinical challenges. Angel customers in Spain, the UK and outside of Europe, including the Americas and Asia, are not affected by this ruling. Angel is constantly developing new solutions to continue to serve its customers well.

The court today ruled that the Torque Ridges feature infringes a patent held by Align Technology Inc. (ALGN) for repositioning a patient's teeth according to an orthodontic treatment plan. Angel respectfully disagrees with the decision and is reviewing it closely while it evaluates its options. Angel will comply with the court's ruling, including the return of any products. Because Torque Ridges is no longer offered in Europe, orthodontists using Angel products and services can continue treating their patients with access to Pressure Points and Angelalign's ongoing clinical and technical support.

• Our priority is to ensure that orthodontists can continue delivering excellent care to their patients, said Xavier Cherbavaz, General Manager and Vice President, Europe, Africa, and the Middle East, Angelalign Technology Inc. • Torque Ridges has already been retired in Europe and replaced with

Pressure Points, an approach intended to support controlled force application and tooth contact. We remain focused on giving orthodontists innovative clinical solutions and a dependable customer experience.â?•

â??Angel takes intellectual property rights seriously and is careful not to infringe on valid patents,â?• added Richard Hirschland, Angelâ??s Chief Commercial Officer and SVP. â??We are reviewing the courtâ??s reasoning carefully and will consider all available options. Angel will continue to innovate and improve its products to benefit its providers and their patients despite litigation by a competitor. Continuous innovation means anticipating challenges and preparing solutions to protect the customer experience. Our transition to Pressure Points reflects that commitment. We are determined to continue developing innovative solutions so that orthodontists can rely on Angel over the long term.â?•
