Smart data capture solution, powered by vision AI, self-verifies consumers in under 10 seconds with data privacy assured enabling retailers to optimize labor and ensure compliance

ZURICH, July 8, 2026 /PRNewswire/ â?? Scandit, the leader in smart data capture, today announced Age Verifi
ed Self-Checkout, a new solution that enables retailers to automate and verify self-checkout purchases of age-restricted items to reduce lane delays, remove avoidable associate intervention and improve compliance.

Built for retailers selling products such as alcohol, tobacco and medication, Age Verified Self-Checkout delivers a fully autonomous checkout with no additional kiosk hardware needed. It addresses one of the biggest sources of friction in self-checkout: the need for store associates to manually intervene on the 9 billion age-restricted, self-checkout transactions globally each year*. With this solution, 80% of age checks are resolved automatically in seconds â?? removing the need for associate intervention, while the verification process is 6x faster for the customer. The streamlined checks result in 5% more transactions across a retailerâ??s full self-checkout fleet leading to shorter queues and increased sales â?? especially during peak hours.

By turning a customerâ??s smartphone into a private, secure, instant age-check tool, the solution allows shoppers to verify their age in under 10 seconds with no app download required primarily via face estimation technology or scanning their ID as an alternative.

In addition to helping retailers avoid the cost and maintenance burden of hardware-based alternatives, it helps them improve operations in three key areas:

â??Retailers are under pressure to deliver faster, more convenient self-checkout experiences, yet age-restricted sales remain a persistent bottleneck and one that only intensifies as self-checkout fleets

scale,â?• said Christian Floerkemeier, CTO and Co-founder of Scandit. â??Today, retailers are forced to choose between absorbing the ongoing labor cost of manual checks or investing in proprietary hardware, neither of which scales efficiently. Age Verified Self-Checkout removes this tradeoff by automating compliance in a fast, secure and hardware-free way, which reduces intervention and optimizes labor.â?•

Powered by Scandit Smart Data Capture with vision AI, the solution marks Scanditâ??s first entry into biometrics and has been designed with privacy at its core. With 100% on-device processing, no biometric or ID data is transmitted or stored by Scandit or retailers. It also complies with key standards, including GDPR, CCPA, ISO/IEC 27566-1, ISO27001 and UKAS Challenge 25 certification.

Age Verified Self-Checkout is designed to be fast and intuitive with a selfie-first design that will verify most shoppers in one step. When a shopper scans a restricted item at self-checkout, the kiosk displays a QR code. The shopper scans the code with their smartphone, which opens a verification page in the browser. The customer then takes a quick selfie, and on-device vision AI estimates their age instantly. If the estimate is above the retailerâ??s threshold, the checkout continues automatically. If the estimate falls below the threshold, the customer is prompted to scan an ID, which is read on-device and compared against the selfie photo to help detect underage customers attempting to use someone elseâ??s ID. The kiosk then receives a single pass/fail signal.

Age Verification Self-Checkout is suited to grocery, supermarket, fuel and convenience retail environments with high self-checkout volumes, strong demand for age-restricted products and limited store labor availability.
