COMUNICATO STAMPA â?? CONTENUTO PROMOZIONALE

STOCKHOLM, June 30, 2026 /PRNewswire/ â?? DomsjÃ¶ Fabriker is moving forward with plans to further develop its existing operations at High Coast Innovation Park in Ã?rnskÃ¶ldsvik, Sweden. The project has applied for a subsidy from Klimatklivet, Swedenâ??s national climate investment programme, to upgrade biogas from industrial processes into liquefied biogas, LBG, which can replace fossil diesel in heavy transport. The aim is to commission the plant during Q4/2028.

The goal is to make better use of side streams and energy flows within the industrial cluster in Ã?rnskÃ¶ldsvik. Biogas from DomsjÃ¶ Fabriker, and potentially other parties within the park at a later stage, will be upgraded into liquefied biogas, LBG, to be used as fuel sold on the open market.

Once the plant reaches full capacity, it is expected to be able to replace approximately 100 GWh of fossil diesel per year with 100 GWh of LBG. This corresponds to an annual reduction in greenhouse gas emissions of approximately 26,700 tonnes of carbon dioxide.

Sweden is currently highly dependent on imported fuels. Local production of liquefied biogas can contribute to increased regional self-sufficiency, stronger security of supply and better access to fossil-free fuels. This is particularly important for heavy transport, such as trucks and shipping, where the transition away from diesel is more challenging than for passenger cars.

DomsjÃ¶ Fabriker is collaborating with Adven, an infrastructure partner in energy, water and side-stream valorisation, which has participated in the projectâ??s development and design phase. The ambition is to continue the partnership into the next phases.

â??We are very pleased to collaborate with DomsjÃ¶ Fabriker, a company with a long history that combines industrial tradition with the courage to adapt to a new era. Together, we can make use of existing industrial flows and develop circular, resource-efficient solutions that create value for both

industry and Sweden as a whole,â?• says Jonas SjÃ¶lander, Group CEO of Adven.

â??This is a climate investment with a clear resilience dimension. Local production of liquefied biogas strengthens Swedenâ??s robustness in the event of disruptions to fuel supply and helps broaden the transition to fossil-free transport, as an important complement to electrification. This is especially significant for heavy transport, where access to reliable fossil-free fuels is crucial. In the long term, liquefied biogas can also create better conditions for fossil-free vehicle fleets in essential public services, such as rescue, police and ambulance services,â?• continues Lena Ek, Board Member at Adven and former Swedish Minister for the Environment.

For the project to be commissioned during the fourth quarter of 2028, an efficient and predictable permitting process is now required. Adven and DomsjÃ¶ Fabriker intend to carry out the project, provided that the state climate investment subsidy is granted and that the necessary permits, including environmental and building permit, are obtained.

â??This is an exciting project that is well aligned with the ambition to create best climate effect per krona invested. Efficient cooperation with the municipality and the county administrative board will now be crucial to keep the schedule, enabling commissioning during the fourth quarter of 2028,â?• says BjÃ¶rn Vedin, CEO of DomsjÃ¶ Fabriker.

About DomsjÃ¶ Fabriker

DomsjÃ¶ Fabriker is a biorefinery located in Ã?rnskÃ¶ldsvik, in Swedenâ??s High Coast region, at the High Coast Innovation Park industrial area. The company refines renewable raw material from the forest into sustainable, bio-based products such as speciality cellulose, lignin and bioethanol. These are used in a wide range of applications, including clothing, pharmaceuticals, packaging and chemicals.

With a focus on maximising the value of every tree and replacing fossil raw materials, DomsjÃ¶ Fabriker contributes to the transition towards a more sustainable society. Production is carried out with high ethics and environmental standards, including the worldâ??s first fully closed and chlorine-free bleaching plant.

DomsjÃ¶ Fabriker is part of Aditya Birla Group, an expanding Indian business group with operations around the world.
