

WHO Foundation and Novo Nordisk Expand Collaboration to Provide Financial Support towards strengthening health systems for Cardio-Renal-Metabolic Diseases

Descrizione

COMUNICATO STAMPA - CONTENUTO PROMOZIONALE

GENEVA, March 11, 2026 /PRNewswire/ - The WHO Foundation today announced an expanded collaboration with Novo Nordisk to support global efforts to strengthen health systems against the rising burden of cardio-renal-metabolic diseases, including obesity and diabetes.

Novo Nordisk has committed a total of USD 7.9 million to support this effort, with an initial gift of USD 2.9 million in 2024 followed by an additional USD 5 million in December 2025.

The contribution will enable the WHO Foundation to support WHO's broader efforts to address noncommunicable diseases through prevention, early action, and strengthened primary health care, particularly in low- and middle-income countries where health systems often face capacity constraints.

"Cardio-renal-metabolic diseases are complex conditions that demand prevention-first approaches anchored in strong and resilient health systems," said Anil Soni, Chief Executive Officer of the WHO Foundation. "By supporting WHO's leadership on prevention, we can reinforce the science and public health foundations that countries need to respond effectively and equitably."

"Addressing obesity, diabetes and related conditions requires partnership at scale - working across governments, communities, civil society and the private sector to advance prevention, early detection and care. In expanding Novo Nordisk's contribution to the WHO Foundation, we hope that more countries will be empowered with the tools, evidence and resources they need to make impactful local action." Said Elin J  nger, Senior Vice President, Corporate Strategy & Sustainability, Novo Nordisk.
