Recognition underscores ACTO's leadership in AI-powered field excellence and agentic AI purpose-built for Life Sciences

TORONTO and NEW YORK, Sept. 14, 2026 /PRNewswire/ - ACTO, uniting human intelligence with empathetic AI in Life Sciences, today announced its inclusion in Everest Group's Top 50 Pharmaceutical Technology Providers for 2026, a global ranking of leading technology providers serving the pharmaceutical value chain.

Everest Group's Top 50 research provides an objective view of the pharmaceutical technology landscape while highlighting key trends including agentic AI, cloud-native capabilities, and strategic partnerships. ACTO's inclusion comes as pharmaceutical companies accelerate investment in technologies that improve commercial and medical execution. Everest Group points to growing demand for omnichannel enablement, customer data unification, and AI-supported personalization across HCP and stakeholder engagement.

"As pharmaceutical enterprises shift from stand-alone workflow digitization toward connected, AI-enabled execution, they are prioritizing technology platforms that can integrate fragmented data and systems while maintaining the governance, traceability, and compliance required in regulated environments," says Durga Ambati, Vice President at Everest Group. "ACTO has established a differentiated position in life sciences field excellence through sustained AI investments spanning knowledge assistance, simulated coaching, and agentic workflow automation. Integrations with platforms such as Veeva and Salesforce further strengthen its position within the broader commercial technology ecosystem. These capabilities have contributed to ACTO's recognition among Everest Group's Top 50 Pharmaceutical Technology Providers 2026."

The report also highlights the rapid shift toward agentic AI, as pharmaceutical technology moves beyond copilots to goal-driven agents that can orchestrate multi-step workflows across systems under strict controls. Commercial and medical engagement are among the early areas of deployment.

This shift aligns directly with ACTO's strategy. Exclusively focused on Life Sciences, ACTO combines its AI-native Field Excellence Platform with role-based SuperAgents purpose-built to augment customer-facing professionals and help them operate with greater efficiency, confidence, and impact.

"We are incredibly grateful to Everest Group for recognizing ACTO among the world's leading pharmaceutical technology providers," said Parth Khanna, Co-founder and CEO of ACTO. "Life Sciences has been our exclusive focus from day one, giving us a deep understanding of the people, workflows, systems, and regulatory realities that make this industry unique. We've built that expertise into our AI-native platform and role-based agentic AI designed to elevate people and accelerate execution. This recognition validates our strategy and strengthens our commitment to continuous innovation as we help define the future of field excellence in Life Sciences."

The Everest Group Top 500 research evaluates providers based on a weighted composite score across four parameters:
